```

09.03.2012 strange error in 2 galacticus jobs `stages_12` and `stages_13` → Markus' converter outdated with new consistenttrees?

idea: `drd5_r256_2` shows a major merger in progress → make a set of similar simulations with slightly different parameters

idea: make voids as constraints so that netto gravity is more centered towards over-densities

08.03.2012 add nohup to `./rockstar server_ib.cfg` in `qsubrockstar.sh` and rename `rocky_startscript` to something recognizable

83973	0.60500	wcon1Gy.st	jan	r	11:01:23	astro14.astro-beowulf.	64
83974	0.50500	rocky_star	harre	r	13:14:22	astro-x4600-04.astro-beo	1

83992	0.58278	c803_test_	markus	qw	14:54:54		50
83985	0.55421	stages_32_	harre	qw	14:14:31		32
83986	0.55421	stages_33_	harre	qw	14:14:41		32

re-galacticussing NgenIC_15039 again since plotting scripts complain that there is no output for a=0

2DO: test speedup of galacticus with 1,2,4,8 threads

Rockstar works if infiniband is forced with PARALLEL_IO_SERVER_INTERFACE = "ib0", the client IP address is indeed NOT necessary, client process is started with auto-rockstar.cfg Gadget recompiled with newest openmpi version → should use infiniband now

06.03.2012 submitted 4 jobs with same seed but different constraints parameters

Memory agglomeration fix also on cluster + email to developer

Wrote E-Mails to Rien de Weijgaert and Peter Behroozi

re-rockstarring stages_21 on my machine pc122 → dumped due to memory

02.03.2012 re-galacticussing NgenIC_15039 cause 200 output redshifts lead to > 30GB file + added luminosity output redshifts from Markus' .xml file

Peter answered and sent consistent_trees v0.99, but problem persists - suspicion: Snapshotnames.dat must be changed (delete corresponding lines) for runs that have < 200 outputs!

rockstar won't start any more ... network problem suspected

01.03.2012 wrote E-Mail to Peter concerning find_parents_and_cleanup:

find_parents_and_cleanup.c:130 problem

consistentree: NgenIC_15039, galacticussing

restarted: stages_21 rockstarred auf AMD-04

first 512³ simulation NgenIC_7755 finished successfully - lasted 1 day on 64 cores

wrote E-mail to de Weijgaert concerning constrained ICs

29.02.2012 stages_12 re-rockstarred auf AMD-03

stages_21 rockstarred auf AMD-04 - crashed

100Mpc 512³ jobs: 11410, 15725, 27036, 7755

10 100Mpc ICs generated

Note: try bigger volumes with NGen-IC

added output redshifts derived from gadget_timer.txt as parameter outputRedshifts in .xml file

Random seeds that do not create cluster like structures at 32Mpc box: 589, 12170, 13610, 16604, 16749, 17362, 17433, 29666, 32223, 17595, 22045, 3724, 3183, 4152, 7581, 8502, 10153, 10657, 22946, 14841, 25060, 29468, 32634

Random seeds that look a little interesting: 15039 → rockstarred on AMD-03 (finished), 26214 → rockstarred on AMD-04

28.02.2012 Successfully started some N-GenIC jobs for comparison of IC generation

17.02.2012 Discussion with Asmus about Stages Cluster → try more systematic approach to ICs

15.02.2012 Galacticus revision 708 - drd5_r256_2 not fixed → E-Mail to Andrew
 check tomorrow: Galacticus jobs fuenfincr256_1 and drdx_3_r256
Note: think about / find a good method for common metadata

14.02.2012 Wrote E-Mail to Bertschinger.

13.02.2012 Deleted some jobs I started yesterday because they had artificial crosses or were practically unconstrained
 Third simulation fuenfincr256_1 ran through - Galacticus restart worked well!
Note: IC with same seed but higher resolution do not yield the same simulation! → started two more test runs from r128 sims to doublecheck

12.02.2012 Updated Galacticus to revision 707 as suggested by Andrew and added parameter `hotHaloOutflowAngularMomentumAlwaysGrows` to xml file.
 Two of four simulations ran through (copied hdf5 to transfer), two crashed → try to continue at saved states!

10.02.2012 wrote E-Mail to Andrew about performance problems and wavelenght computation error in fuenfincr256_1
 started some runs with higher central delta and broader smoothing lenghts, i.e. 32/dx and 100/dx; all 128 resolution except second last one (same seed!):

83492	0.60500	d31c_1_st	harre	r	02/10/2012	15:19:56	astro18	16

83498	0.60500	d15+3c_s15	harre	r	02/10/2012	15:44:23	astro30	16

09.02.2012 drd5_r256 last written to hdf5 file feb 09, 05:07
 fuenfincr256_2 last written to hdf5 file feb 06, 03:28
 drd5_r256_2 last written to hdf5 file feb 07, 00:50

02.02.2012 drdx_h100_128_1 run has again severe consistency metric problem
 → not clear why
 upper python script does not work, was commented out again
 plan: **move to python scripts in general in order to have easier arithmetic calculations**
 plan: create new folder structure and remove old simulations → done

31.01.2012 note: h=70.3 in galacticus xml input file is expected, consistent tree obviously implies it
 → fixed: changed in markus parameter file for the converter and in xml file
 → question: why not read out?
 → python updateGalacticusStart.py from Markus

30.01.2012 new consistenttree with vmax=20

Chapter 2

Simulations

2.1 r128

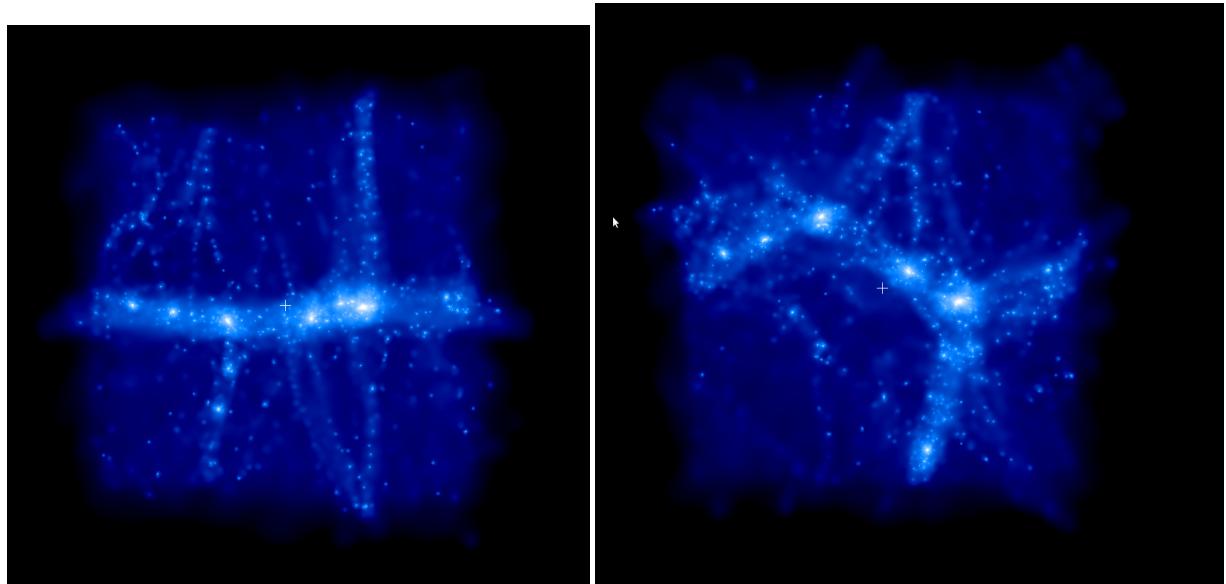

2.1.1 drdx_3

ROCKSTARRED ✓

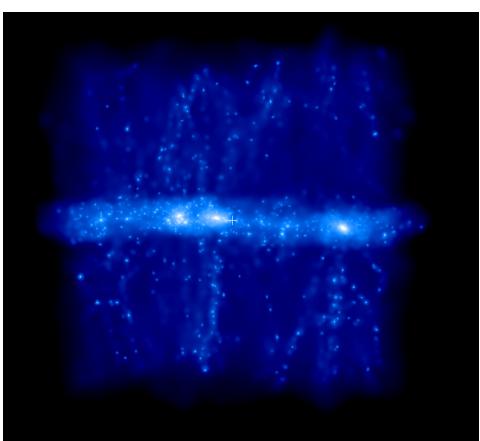

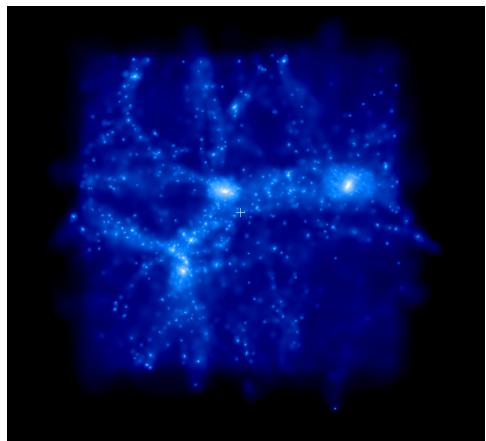

pfff → Error: too few halos at scale factor 0.926072 to calculate consistency metric.

2.1.2 drdx_h100_r128_1
