Chapter 1

Notes

19.03.2012 ..

14.03.2012 2DO: new stages simulations in Documentation (at least 46, 50, 51)

Script that makes *.pngs out of halo masses at all time steps is running over all simulations in r256 for comparison bewteen Bertschinger and NGenIC ICs

Rerun some Bertschinger ICs with updated linger.dat and spectral index $\neq 1$ to see how this influences star formation rate (linger runs and runs)

13.03.2012 Unclear why all NGenIC simulations show much higher star formation and plot scripts yield different output files though the same .xml file as always is used

11.03.2012 NGenIC_15039 produces "unreadable" output, is bein rerockstarred from scratch

```
+++
Plot_Star_Formation_History.pl:

```

09.03.2012 strange error in 2 galacticus jobs `stages_12` and `stages_13` → Markus' converter outdated with new consistenttrees?

idea: `drd5_r256_2` shows a major merger in progress → make a set of similar simulations with slightly different parameters

idea: make voids as constraints so that netto gravity is more centered towards over-densities

08.03.2012 add nohup to ./rockstar_server_ib.cfg in qsubrockstar.sh and rename rocky_startscript to something recognizable

83973	0.60500	wcon1Gy.st	jan	r	11:01:23	astro14.astro-beowulf.	64
83974	0.50500	rocky_star	harre	r	13:14:22	astro-x4600-04.astro-beo	1

83992	0.58278	c803_test_	markus	qw	14:54:54		50
83985	0.55421	stages_32_	harre	qw	14:14:31		32
83986	0.55421	stages_33_	harre	qw	14:14:41		32

re-galacticussing NgenIC_15039 again since plotting scripts complain that there is no output for a=0

2DO: test speedup of galacticus with 1,2,4,8 threads

Rockstar works if infiniband is forced with PARALLEL_IO_SERVER_INTERFACE = "ib0", the client IP address is indeed NOT necessary, client process is started with auto-rockstar.cfg Gadget recompiled with newest openmpi version → should use infiniband now

06.03.2012 submitted 4 jobs with same seed but different constraints parameters

Memory agglomeration fix also on cluster + email to develooper

Wrote E-Mails to Rien de Weijgaert and Peter Behroozi

re-rockstarring stages_21 on my machine pc122 → dumped due to memory

02.03.2012 re-galacticussing NgenIC_15039 cause 200 output redshifts lead to > 30GB file + added luminosity output redshifts from Markus' .xml file

Peter answered and sent consistent_trees v0.99, but problem persists - suspicion: Snapshotnames.dat must be changed (delete corresponding lines) for runs that have < 200 outputs!

rockstar won't start any more ... network problem suspected

01.03.2012 wrote E-Mail to Peter concerning find_parents_and_cleanup:

find_parents_and_cleanup.c:130 problem

consistenttree: NgenIC_15039, galacticussing

restarted: stages_21 rockstarred auf AMD-04

first 512³ simulation NgenIC_7755 finished successfully - lasted 1 day on 64 cores
wrote E-mail to de Weijgaert concerning constrained ICs

29.02.2012 stages_12 re-rockstarred auf AMD-03

stages_21 rockstarred auf AMD-04 - crashed

100Mpc 512³ jobs: 11410, 15725, 27036, 7755

10 100Mpc ICs generated

Note: try bigger volumes with NGen-IC

added output redshifts derived from gadget_timer.txt as parameter outputRedshifts in .xml file

Random seeds that do not create cluster like structures at 32Mpc box: 589, 12170, 13610, 16604, 16749, 17362, 17433, 29666, 32223, 17595, 22045, 3724, 3183, 4152, 7581, 8502, 10153, 10657, 22946, 14841, 25060, 29468, 32634

Random seeds that look a little interesting: 15039 → rockstarred on AMD-03 (finished), 26214 → rockstarred on AMD-04

28.02.2012 Successfully started some N-GenIC jobs for comparison of IC generation

17.02.2012 Discussion with Asmus about Stages Cluster → try more systematic approach to ICs

15.02.2012 Galacticus revision 708 - drd5_r256_2 not fixed → E-Mail to Andrew check tomorrow: Galacticus jobs fuenfincr256_1 and drdx_3_r256

Note: think about / find a good method for common metadata

14.02.2012 Wrote E-Mail to Bertschinger.

13.02.2012 Deleted some jobs I started yesterday because they had artificial crosses or were practically unconstrained

Third simulation fuenfincr256_1 ran through - Galacticus restart worked well!

Note: IC with same seed but higher resolution do not yield the same simulation! → started two more test runs from r128 sims to doublecheck

12.02.2012 Updated Galacticus to revision 707 as suggested by Andrew and added parameter `hotHaloOutflowAngularMomentumAlwaysGrows` to xml file.

Two of four simulations ran through (copied hdf5 to transfer), two crashed → try to continue at saved states!

10.02.2012 wrote E-Mail to Andrew about performance problems and wavelenght computation error in fuenfincr256_1

started some runs with higher central delta and broader smoothing lenghts, i.e. 32/dx and 100/dx; all 128 resolution except second last one (same seed!):

09.02.2012 drd5_r256 last written to hdf5 file feb 09, 05:07

fuenfincr256_2 last written to hdf5 file feb 06, 03:28

drd5_r256_2 last written to hdf5 file feb 07, 00:50

02.02.2012 drdx_h100_128_1 run has again severe consistency metric problem

→ not clear why

upper python script does not work, was commented out again

plan: **move to python scripts in general in order to have easier arithmetic calculations**

plan: create new folder structure and remove old simulations → done

31.01.2012 note: $h=70.3$ in galacticus xml input file is expected, consistent tree obviously implies it

→ fixed: changed in markus parameter file for the converter and in xml file

→ question: why not read out?

→ python updateGalacticusStart.py from Markus

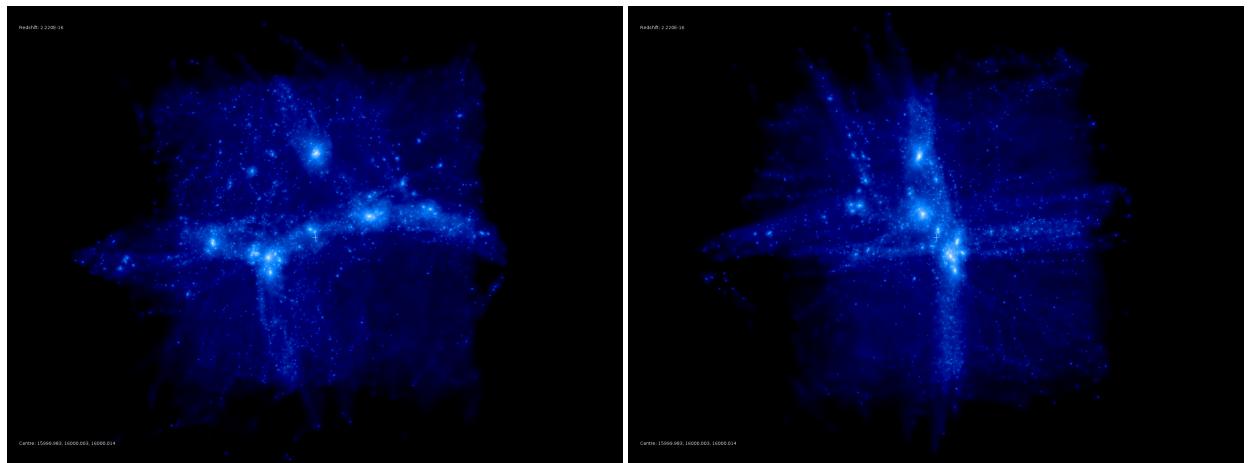

30.01.2012 new consistenttree with $vmax=20$

Chapter 2
